

**Nutritional additives for
livestock feed**

DCP PHOSPHATE DICALCIUM

Calcium, together with phosphorus, plays important physiological roles in the metabolic processes of livestock and is responsible for the structure of their bones and their mechanical stability.

- DCP is produced by ICL Fertilizers Ltd. and meets all the standards and stringent requirements;
- Its texture is granular without dust contents;
- This additive is supervised by the Ministry of Agriculture - the Feed Unit.

DCP is marketed in a variety of conventional packaging as well as in bulk or pneumatic dispatch.
