

Gardening and landscaping

Sumsumon

The selection and abundance of various sizes and colors of Sumsumon available to landscape architects and gardeners allows them to design gardens and parks of the highest level, with an emphasis on the small details.

The wide selection of different sizes serves as a useful tool for architects, offering them the possibility of combining several sizes of stones in their garden designs, while using a range of unique motifs and options.

The variety of materials produced by Zmitut, together with other materials that we import, gives the company an advantage in the field of gardening and landscaping. Natural shades of natural stone used for floor coverings today constitute an advanced product that can be adjusted to supply many different architectural requirements.

Zmitut is a leading supplier of floor coverings at the Bahai Gardens in Haifa and Acre, and other unique places.

Sumsumon is a light-colored limestone, with a hard crystal ranging from 1.4 to 2.5 mm, which is another resource used in the gardening world for surfacing floors and building trails. It can also be used as a shock-absorbing material in playgrounds.

Size (in mm)	1.4-2.5
