

Construction

Red

This is a compact macro-crystalline limestone stone that is excavated in the Galilee region of Israel. It has a red color with light spots. It is unique in its reddish color, which is uncommon in Israel.

The raw material undergoes a rigorous screening process to achieve a uniform color and exclude foreign substances.

This is a very hard stone with low absorbency, which makes it suitable for the flooring industry, granulite coating of surfaces and walls, paving soils, colorful asphalt, finishing materials in the construction field, and more.

Size (in mm)	16-25	9-16	2.5-9	1.4-2.5
--------------	-------	------	-------	---------

Chemical Analysis	Results in %	Properties tested according to SI 1098	Results in %
SiO ₂ general	0.1	Crushing rate	17.8
SiO ₂ soluble	0.4	Dust content	0.30
MgCO ₃	1.1	Absorption	0.9
CaCO ₃	98.0	Specific gravity kg/m ³	2632
Al ₂ O ₃ +Fe ₂ O ₃	0.4	Solidity	0.9
